Adding this IP address as the node we will monitor with Prometheus and its port.

NOTE: We could also use Service Discovery in order for us not to have to hardcode as much and change the configuration for each node address and detail, this in the case of having a bigger infrastructure.

```
global:
  scrape_interval: 15s
  external_labels:
    monitor: 'prometheus'

scrape_configs:
  - job_name: 'prometheus'
    static_configs:
      - targets: ['35.175.64.252:9100']
```

Checking the Prometheus dashboard looking for correct endpoint.
